

AI USAGE POLICY

Kwankamol Nongpong, Ph.D.
Department of Computer Science
Assumption University

PURPOSE

Artificial Intelligence (AI) tools such as ChatGPT, GitHub Copilot, and others can be valuable aids in learning.

This policy aims to help you **use AI responsibly**—as a tool for learning and creativity, not as a shortcut that replaces understanding.

ACCEPTABLE USE

You **may use AI tools** to:

- brainstorm ideas or clarify concepts;
- review or explain code (to help you understand, not copy);
- debug or test your own work;
- get feedback on structure, readability, or optimization of your code;
- learn alternative approaches after you've attempted the problem yourself.

If you use AI, you **must**:

- **Acknowledge** its use in your submission (e.g., "Used ChatGPT to understand recursion base case logic").
- **Verify and revise** all AI-generated content before submission.
- Be ready to **explain or modify** any work you submit.

UNACCEPTABLE USE

You **must not**:

- Submit AI-generated code, answers, or explanations as your own without understanding them.
- Use AI to generate entire solutions or written reflections and submit them unchanged.
- Copy-and-paste from AI tools without verification or citation.
- Use AI tools during closed assessments (unless explicitly allowed).

Violating these rules is considered **academic dishonesty** and may result in disciplinary action according to university policy.

INSTRUCTOR'S APPROACH

The instructor values **learning through reasoning**.

You may be asked to:

- explain your code or solution orally;
- modify your work during interviews or live sessions;
- discuss how AI helped you.

This is **not to penalize** you—but to ensure you truly understand your submissions.

WHY THIS MATTERS

AI can make you faster, but only *understanding* makes you valuable.

As future computer scientists, you are expected to:

- analyze, not just reproduce results;
- evaluate the correctness of AI output;
- practice ethical and transparent use of emerging technologies.

EXAMPLE
STATEMENT TO
INCLUDE IN
YOUR WORK

“I used ChatGPT to help me identify syntax errors and explain how recursion terminates. I reviewed and modified the response before integrating it into my solution.”
